

New & Updated Features for SG 11.8.5 Release (March 14, 2024)

1. Updated SystemGalaxy.exe to automatically enable (turn ON) the 'Use Web Services' option if the system is registered for idProducer badging and the 'Use Web Services' option is OFF. This condition is detected at the time System Galaxy is launched.
2. (NEW) TKE Elevator System with Agile Kiosk interface: up to 128 front and rear landings up to 16 front and rear kiosks per landing, front and rear up to 15 elevator cars with front-only or front-&-rear doors. up to 4 elevator groups per system.
3. (NEW) Active Directory Change Management App (API-based Active Directory Service).
Releasing a new API-based Active Directory Change Management App and GCS AD Service that will automatically push AD Users into the System Galaxy cardholder/card tables. The AD tool uses Change Cookies and record Look-up of mapped fields to continually update imported User Records. The import/update can be done manually or automatically based on a configurable timer. Once the AD User is imported, any future changes in the User Account from Active Directory can be automatically pushed into System Galaxy.
4. NOTICE: Microsoft IIS settings must be installed using the Galaxy IIS Install Helper Utility... IIS is required for LaunchPoint Web Client and idProducer Badging Solution. You must run Galaxy's IIS Install Utility from Step 4 of the Galaxy Installation USB/ISO. You must run the IIS Install Helper Utility before you install idProducer or LaunchPoint.
5. LaunchPoint Web Client Updates ...
 - a. Help icon added to Dashboard header linking to LP Help page for user support.
 - b. Setting to restrict deletions of cardholders (will be marked inactive instead) if desired.
 - c. Can now restrict deletions of access groups, schedules, and special days.
 - d. Option to enable/disable customers' ability for Bluetooth credential creation.
 - e. Integration with TBS biometrics.

Fixes

1. Bug fix for error caused in some scenarios when disabling a cardholder from the Live Events screen.
2. Corrected issue with cardholders' Additional Data fields missing data in System Galaxy when entered from LaunchPoint (LP).
3. Fixed problem with warning modal for browser snooze appearing before the browser falls asleep.
4. Now able to modify cardholders regardless of if the connection to idProducer subscription is successful.
5. Created a workflow resolving issues with master/non-master operators adding shared loops to a profile.
6. Resolved error from enrolling cards in Live Events when events involve 40-bit credentials.
7. Corrected problem with saving data in LP containing the word "Exception" .
8. Resolved an error with Time Schedules unable to be modified or accessed in LaunchPoint.
9. Issue with cardholder filtering between customers when cardholder ID codes are the same has been corrected.
10. Cardholder Search now returns correct results when searching with non-alphanumeric characters.
11. Fixed issue where LP saved card data incorrectly for some card technologies.
12. Expanded error logging.
13. Made corrections to text for modal windows.
